

# **THE GEOGRAPHY OF WORLD HAPPINESS: SPATIAL ANALYSIS IN THE PEOPLE'S LIFE SATISFACTION**

Graduate School of Economics and Management  
TOHOKU UNIVERSITY

Anqi Li

# INTRODUCTION

Your life goes well when you are happy.

Happiness is experiences of pleasure and purpose over time.

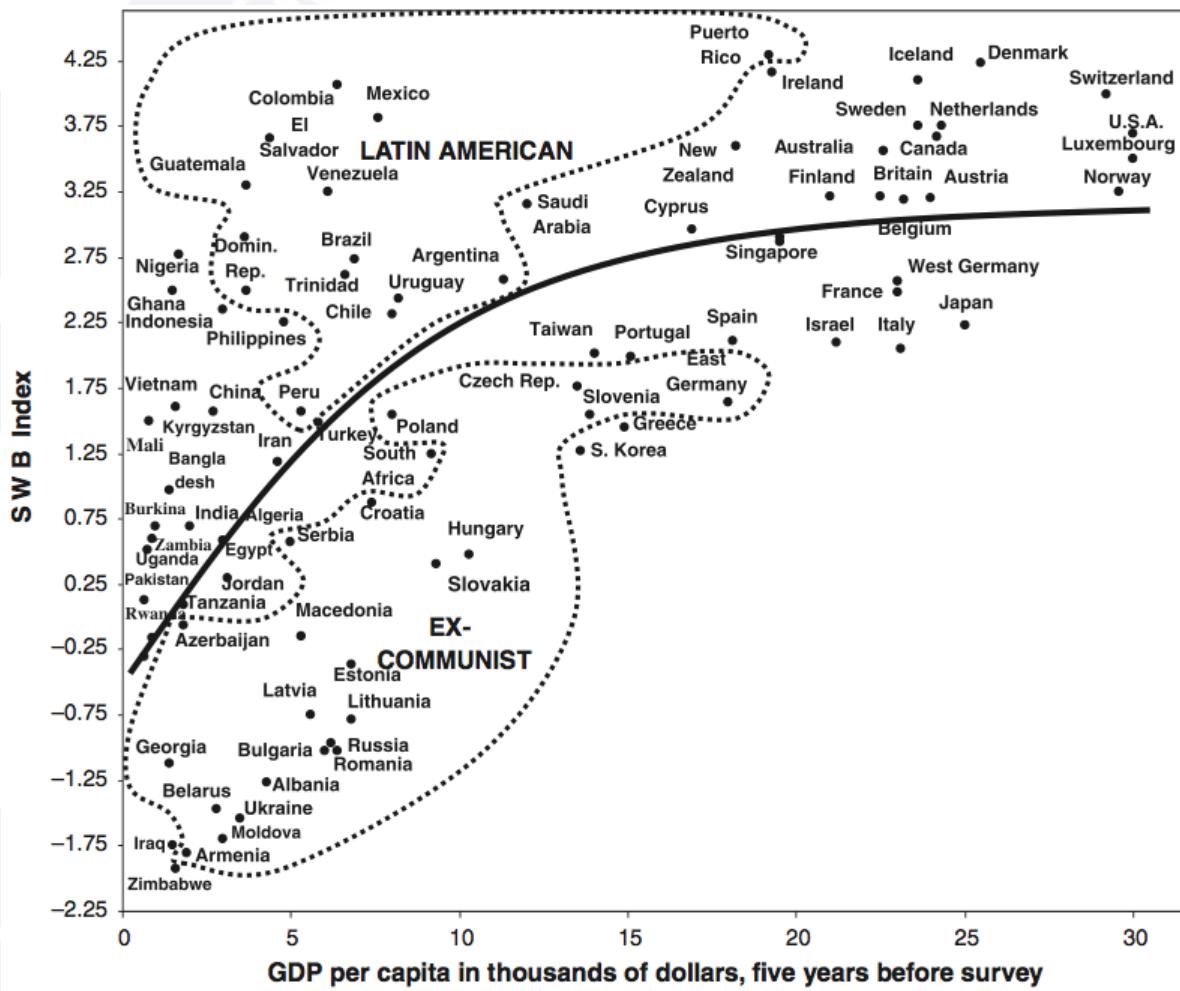

**Life satisfaction (LS)** is measured on a 1-10 scale, based on the question: “*All things considered, how satisfied are you with your life as a whole these days?*”

## World Happiness Report

- Dependent Variable: averaged national happiness scores
- Independent Variables: Social-demographic + Macroeconomic
- Linear Regression Analysis (OLS)

# EASTERLIN PARADOX

Easterlin argued that life satisfaction does rise with average incomes but only up to a point. Beyond that, the marginal gain in happiness declines.

# MY EMPIRICAL ANALYSIS

- **Individual-level:**

The evaluated national LS after controlling social-demographic characteristics , and the factors related to personality.

- **Country-level:** the spatial similarity in people's happiness.
- **Divide data into three classes :**

|                        | Low-Fin.sat | Middle- Fin.sat | High-Fin.sat |
|------------------------|-------------|-----------------|--------------|
| Scale                  | 1~4         | 5~7             | 8~10         |
| Number of observations | 23,121      | 39,457          | 24,749       |

*Satisfaction with financial situation (FS)*was measured on a 1-10 scale, based on the question: “*How satisfied are you with the financial situation of your household?*”.

# SPATIAL MODEL

$$(1) \quad Y_{ij} = C_j \beta_j + X_i \gamma + u_{ij}, \quad j = 1, \dots, N, \quad i = 1, \dots, n_j$$

$$(2) \quad \begin{aligned} \beta &= (\beta_1, \dots, \beta_N)' \\ \beta &= \rho_1 W \beta + Z_j \alpha + e \\ e &= \rho_2 W e + f, \quad f \sim N(0, \sigma^2 I_N) \end{aligned}$$

$Y_{ij}$ : dependent variable, life satisfaction for all individual i within a country j.

$C_j$ : country dummy variables.

$X_i$ : individual-level explanatory variables.

$Z_j$  : country-specific explanatory variables.

$W$  : Spatial weight matrix, which is a  $N \times N$  matrix that represents the spatial relationship among N countries.

- $W_{ij} = \begin{cases} 1, & \text{if the country } i, j \text{ are in the same region} \\ 0, & \text{otherwise} \end{cases}$

Regions: Africa, Latin America, North America, Europe, Western Asia, Eastern Asia, Southern Asia, Central Asia, South-Eastern Asia, Pacific.

# DATASET

- **Individual-level Data:** A large samples of individuals for 58 countries, are from the World Value Survey (2010-2012 Wave 6).
- **Country-level Data:** The data source are from the World Bank Database.

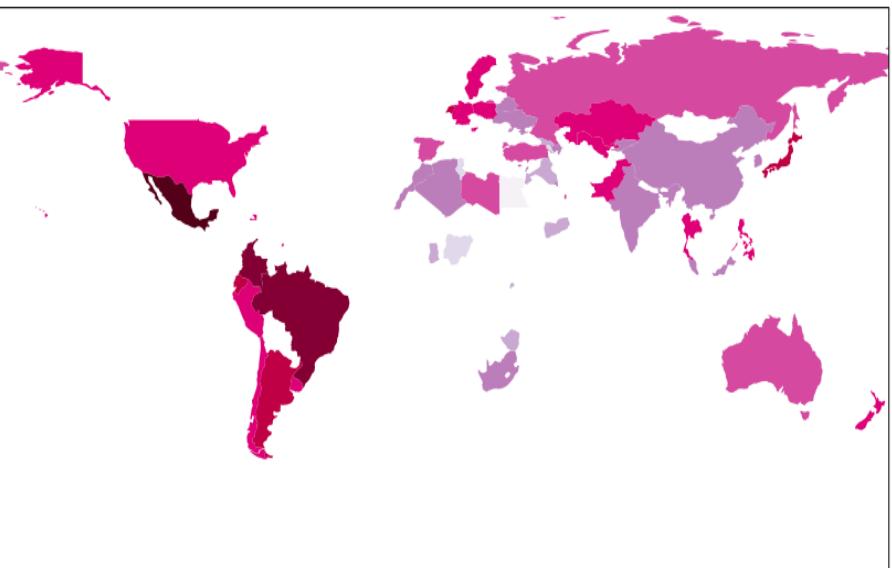

# RANK FOR THE ESTIMATES OF LIFE SATISFACTION

| Country                | LS     | rank1 | FS_low | rank2 | FS_middle | rank3 | FS_high | rank4 | Country                  | LS     | rank1 | FS_low | rank2 | FS_middle | rank3 | FS_high | rank4 |
|------------------------|--------|-------|--------|-------|-----------|-------|---------|-------|--------------------------|--------|-------|--------|-------|-----------|-------|---------|-------|
| Algeria                | 6.5168 | 42    | 5.0976 | 43    | 6.5387    | 47    | 7.649   | 55    | Malaysia                 | 6.5288 | 41    | 5.6188 | 27    | 6.581     | 46    | 7.9147  | 49    |

# CONCLUSION

- When people talk about happiness, they should take spatial factor into consideration.
- Latin Americans seemed to be naturally happier than other regions, but Africans did the opposite.
- People with high-financial, the effect of macro-economic factors on their happiness is smaller than others.

Thank you very much !
